(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-26 are rejected under 35 U.S.C. 102(b) as being anticipated by You et al. USPN 5,787,245 (hereinafter You).

Regarding claim 1, You anticipates a system (a method, & a product, see columns 79-81, lines 1-35) comprising: a first portable thread environment (PTE) (60:35-50, see server), comprising a diagnostic tool (60:35-45); a second PTE configured to receive and send threads (60:35-45, see client);

a third PTE configured to receive and send the threads (see, fig 14 for thread listener, also see); and a PTE router configured to receive the threads and route said threads, wherein the router copies the threads and routes the copies to the diagnostic tool (9:24-30, see debugger object).

Regarding claim 2, the system of claim 1 wherein the diagnostic tool uses the copies to generate diagnostic messages (10:56-59).

Regarding claim 3, the system of claim 2 wherein the diagnostic messages show the threads execution order (2:43-48).

Regarding claim 4, the system (for method, see column 82) of claim 2 wherein the diagnostic messages show all messages generated by the threads (8:40-45).

Regarding claim 5, the system of claim 2 wherein the diagnostic messages show all messages generated for the threads (8:40-45).

Art Unit: 2122

Regarding claim 6, the system of claim 2 wherein the diagnostic messages trigger new events to be performed (8:28-37).

Regarding claim 7, the system of claim 2 wherein the diagnostic tool identifies the threads source (10:11, see client identification, also see 33:10-20).

Regarding claim 8, the system of claim 2 wherein the diagnostic tool truncates threads exceeding a predetermined size (27:3-5).

Regarding claim 9, You anticipates a method, (and system, see fig 2) comprising: intercepting threads (fig, 14 see thread listener and notification) passed from a first PTE to a second PTE (60:35-45, see client and server); copying the threads (34:8-11); generating a diagnostic message by a PTE Tool (10:56-59); and displaying the diagnostic message, wherein the diagnostic message shows the threads execution order (7:20-26, see display and for execution order see program state).
